SOME EVERY-DAY DISHES

IN THE KITCHEN very great care should be exercised to see that all articles of food—especially those in frequent or general use—are of the highest purity and greatest nutriment possible, otherwise the health and general welfare of the family may suffer.

The high standard of purity, the exceptionally nutritious properties, and the general excellence of LYLE'S GOLDEN SYRUP, together with the manifold uses to which it can be put, have deservedly brought it into great prominence and general favour with all who practise the culinary art.

With its aid many nourishing and extremely tasty delicacies are available, which also have the additional merit of being inexpensive and economical.

A few Recipes of some well-known puddings, cakes, tarts, &c., in every-day use, will be found on the following pages, and which may prove useful to some of the many consumers of

LYLE'S GOLDEN SYRUP,

or any whose duties include cooking in some form or other.

A FEW USEFUL HINTS

IN COOKING, as with most other things, careful practice, together with the use of one's power of observation, do much to produce excellence.

Considerable time may be saved and better results achieved if the peculiarities of the various ingredients are watched and carefully noted.

Like many other articles of food, Golden Syrup requires a little special attention during the cooking process, and some treatment peculiar to itself and articles of its class, which if neglected may give trouble and cause failure. Golden Syrup is, of course, closely allied to sugar, and, like many sugar compounds, it is liable to burn if subjected to too great heat in the oven. Care should therefore be exercised to see that—except where expressly directed otherwise—cakes, &c., containing Golden Syrup are baked in a slow to a moderate oven. Occasionally it happens that to get a certain result a greater heat is desirable, but in the few instances where this is necessary it is always clearly stated.

Before commencing cooking it is well to see that the oven has been brought to the desired temperature, and that all the required articles are in readiness. It is, of course, essential to success that all ingredients should be carefully prepared and thoroughly mixed, and that, with cakes, &c., in particular, directly

the mixing process is complete the mixture be at once placed in the oven, and, if possible, not moved until it is set.

With the Pudding recipes the basin containing the pudding mixture should be put into boiling water and on no account allowed to stop boiling. It will be found that better results are obtained if it is kept boiling fairly fast and the water kept about one inch below the top of the basin.

With the Cake recipes the results will generally be more satisfactory if a good caster sugar, such as Tate's finest Caster sugar, is used in the mixing.

LYLE'S GOLDEN SYRUP will more readily mix with other ingredients if it is slightly warmed.

Occasionally when using very hard flour it may be necessary to add more moisture than is given in the recipes to bring the mixture to the required consistency. In such cases a little milk may be added with advantage.

The method often adopted of guessing at quantities, although occasionally successful, is very uncertain and one to be deprecated.

The careful weighing of all contents is, of course, the most desirable process, but where this is found troublesome very good results may be obtained by measuring according to the table given on page 47, which gives the approximate weights of the contents of measures that are always at hand, and doubtless this table will prove very useful to many.

It is almost needless to add that in all cookery processes scrupulous cleanliness should be observed.

LYLE'S GOLDEN SYRUP is a nutritious and digestible food in an agreeable form, yielding the full "muscular energy" value of sugar. It is carefully prepared under scientific supervision, and its purity and excellence have been attested by some of the highest authorities, and it is recommended as purer and more wholesome than raw sugar and the old-fashioned molasses.

The Golden Syrup has no action on the tins in which it is packed, and micro-organisms do not grow in it.

In modern commerce there is probably no better example of the public appreciation of true merit combined with honest value than is instanced by the present enormous and increasing demand for Lyle's Golden Syrup, which, second only to its intrinsic merits, owes its present position as an important food product to that best of all testimonials, the private recommendation of one person to another. Owing in some measure to this, and to the improved methods of manufacture, the proprietors are enabled to give the very best

article of its kind at a price that is practically the same as is often charged for common syrups or molasses.

The absolute purity of Lyle's Golden Syrup has been proved by the reports of many of the leading analysts of the day ; while its exquisite flavour and delicate appearance are appreciated at the tables and in the nurseries of all classes throughout the country from the castle to the cottage.

As a food of great nutriment, and possessing many healthful properties, it is extremely useful and much sought after for children as well as for those of older growth. Its gentle laxative effect makes it an important article of children's diet, and a pleasant substitute for fruit, while it has the additional merit over jam or other similar foods that there is no possibility, through accident or otherwise, of its becoming contaminated with impure or over-ripe fruit.

Yolk of one Egg	
Juice of half a Lemon	
Vanilla Essence	A few drops
LYLE'S GOLDEN SYRUP	2 tablespoonfuls

Mix yolk of egg and Syrup together, add all other ingredients, make it hot in a double saucepan (or a jug stood in a saucepan of hot water), well stirring all the time. Then pass through a sieve and when cold, freeze.

This can also be made at less cost by using all milk instead of half cream and half milk.

An inexpensive freezing apparatus can be made by taking two empty LYLE'S GOLDEN SYRUP tins, one of the 4 lb. size and one of the 1 lb. size, and after carefully cleaning the inside of the latter, put the cream mixture therein and securely fasten down the lid. Place the smaller tin inside the larger one and pack the remaining space tightly with broken ice and freezing-salt. Put the lid on and roll backwards and forwards on the floor for twenty to thirty minutes, occasionally taking it up and shaking well.
